

PDFCreator 0.9.3

Requirements: Windows XP

Limitations: None

Contact: Open Source

Website: sourceforge.net/projects/pdfcreator

Create PDF files for free.

PDFCreator isn't a separate word processor/DTP package with new and strange buttons, and menu layouts to learn. It works with every document-creation application available.

It acts like a printer, so all you need do is open whichever file you want, in whichever application you want, and go to the Print menu.
